stream or the stream of data structured in packets based upon a selection signal.

39. A method according to Claim 38 further comprising generating the selection signal based upon the received digital data.

40. A method according to Claim 35 further comprising:  
detecting a zero-crossing of a voltage level on the electrical power line; and  
providing an output logic signal to the modem in response to the zero-crossing of the voltage level.

41. A method according to Claim 35 further comprising:  
detecting a voltage level in a frequency band selected for transmission over the electrical power line; and  
producing a logic signal when the voltage level exceeds a threshold.

42. A method according to Claim 35 wherein the modem comprises at least one control register for storing the digital data and for controlling verification thereof.

#### REMARKS

It is believed that all of the claims are patentable over the prior art. Accordingly, after the Examiner completes a thorough examination and finds the claims patentable, a Notice of Allowance is respectfully requested in due course.
